Report Style Showcase

Evidence-based report components for AI-search, SEO/GEO, and operational audit exports.

By Marcus Quinn (https://github.com/marcusquinn).

Internal toolkit · May 2026 · v4

Component stress-test for DESIGN.md-backed report styles. Render this same Markdown through different templates to compare typography, palette, spacing, borders, cards, tables, badges, code blocks, and print profiles.

34	**16:9**
A4	**MD**

Executive summary

This showcase demonstrates the report components expected in the LLM Visibility Toolbox examples: a non-numbered executive summary, numbered H2 chapters, plain H3 subheadings, sources grouped by type, badge keys, checklists, code/block templates, callouts, accordions, and a version summary.

RCT	Peer-reviewed paper or controlled comparison with documented methodology.
STRONG	Large primary-data analysis from an independent source.
VENDOR	Vendor-published study with methodology, but commercial conflict of interest.
PRACTITIONER	Practitioner report or anecdote, often without a control group.
HYGIENE	Technical baseline that is not experimentally measured but follows from how the bots work.

▼ **What changed in v4**

ACTION: review the numbered chapters below and compare the generated HTML against the source Toolbox patterns.

▼ **Action Prompt**

CHAPTER 1

1. Why this matters now

Use anchor links (#priority-and-checklist), appendix links (../llm-visibility-toolbox/report.html), numbered steps, accordions, coloured panels, and source cards in the same canonical Markdown.

EVIDENCE: VERIFIED EVIDENCE: PARTIAL EVIDENCE: INFERRED EVIDENCE: MISSING

Evidence values should read as plain **Evidence:** text followed by a colour-coded mini badge for the value only.

Table stress (#table-and-source-cards) Cards (#cards-and-callouts)

Priority (#priority-and-checklist)

CHAPTER 2

2. Highest impact, most validated

Use plain narrative and bullets when that is clearer than a panel. Panels are reserved for warnings, action blocks, source cards, or high-emphasis evidence.

2.1 Earned media on third-party platforms

STRONG

Six converging studies point to third-party mentions as a stronger AI visibility signal than isolated owned-page edits.

- Build a quarterly cadence across trade press, community, video, and partner surfaces.
- Pair each campaign with source IDs and prompt reruns.
- Verify movement separately in AIO, Gemini, ChatGPT, AI Mode, and Perplexity.

> ACTION: coordinate one trade article, one community thread, one video transcript, and one partner citation within the same quarter.

▼ **Action Prompt**

A plain bullet section should remain plain:

- Robots.txt and crawlability check for key AI bots.
- Render test with a representative answer-engine user agent.
- Schema audit on priority pages.
- Prompt list from Search Console, support tickets, and customer interviews.
- Baseline share of voice, citation rate, and sentiment per engine.

CHAPTER 3

3. On-page content tactics

Component	Stress condition	Expected result
Evidence badge	Long table cell with badge EVIDENCE: VERIFIED	Badge stays readable and does not split words.
Facts table	Multiple columns with prose	Table remains usable in HTML and constrained in print.
Source card	Evidence note near claim	Card is visually distinct from normal paragraphs.
Sidebar	Many headings	Sticky TOC remains secondary to content and active link updates.

CHAPTER 4

4. Technical tactics

4.1 Info panel

Use info panels for caveats, assumptions, and reading guidance that should not become recommendations.

4.2 Impact panel

Why this changes the plan: a high-impact finding changes sequencing, budget, owner, or acceptance criteria.

4.3 Action panel

Next action: turn the finding into a concrete implementation step with owner, proof path, and rerun command.

▼ **Action Prompt**

4.4 Tactic card

- What: compact recommendation summary.
- Why: links action to evidence.
- How: gives implementation shape.
- Verify: names the acceptance check.

4.5 Good row

Crawlable claims, source IDs, direct answers, and page-type weighting.

4.6 Bad row

Unsupported claims, hidden content, generic tactics, and missing verification.

4.7 Myth	Every page needs the same GEO checklist.
4.8 Fact	Page type determines which tactics are useful, conditional, or noise.

▼ **How to read this document (evidence badges)**

▼ **Key methodology caveat**

> *Quotes highlight expert evidence, user language, or a decision constraint without turning it into a recommendation.*

Author block template

TEXT CODE

```
Written by Dr. Jane Doe, PhD
Principal Data Scientist, ExampleCo

Jane led the data platform team from 2019 to 2024 and now researches LLM retrieval.

LinkedIn | Google Scholar | Personal site
```

Render command

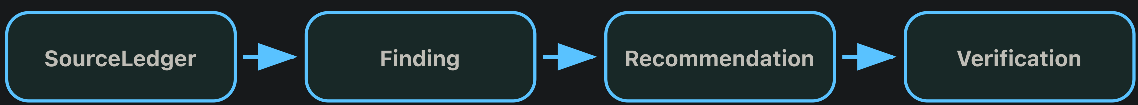
TEXT CODE

```
.agents/scripts/report-render-helper.sh render report.md --template lottiefiles --pdf-profile slides-
```

Mermaid fallback

MERMAID SOURCE FALLBACK

```
flowchart LR
  SourceLedger --> Finding
  Finding --> Recommendation
  Recommendation --> Verification
```



Rendered Mermaid example, embedded as self-contained SVG.

LaTeX fallback

LATEX SOURCE FALLBACK

```
\text{LLM visibility} = \alpha citations + \beta mentions + \gamma retrieval - \delta decay
```

$$\text{LLM visibility} = \alpha \text{ citations} + \beta \text{ mentions} + \gamma \text{ retrieval} - \delta \text{ decay}$$

Rendered LaTeX example, embedded as self-contained HTML.

Inline LaTeX fallback: {{latex:\text{visibility} = \alpha citations + \beta mentions + \gamma retrieval}}.

Citation readiness — 72%

Third-party corroboration — 58%

Retrieval eligibility — 81%

CHAPTER 5

5. Off-page and authority

Authority work belongs outside the site as much as on it: profile parity, trusted third-party mentions, practitioner credentials, and community proof all support retrieval and citation decisions.

CHAPTER 6

6. Format and experimental tactics

6.1 SEO myths called out

Claims that circulate widely but cannot be traced to a primary source, or are contradicted by controlled evidence, should be called out explicitly.

“Schema markup alone creates citation uplift.” Contradicted by controlled or near-controlled studies; ship schema as hygiene.

“Longer content always gets cited more.” Engine-dependent; content depth helps only when it improves answer density and source usefulness.

CHAPTER 7

7. Measurement and reporting

7.1 High-priority visual checks

Review spacing, table width, no-wrap badges, active TOC highlighting, print CSS, and component contrast.

7.2 Refresh checklist per page

- [ ] Replace at least one statistic with newer data.
- [ ] Add or revise one example.
- [ ] Remove outdated tool or vendor references.
- [ ] Update screenshots if UI has changed.
- [ ] Update dateModified in schema.
- [ ] Add visible “Last updated” line.

CHAPTER 8

8. What does not work

8.1 Combined finding

AI is now a discovery layer, but engines disagree on sources. Tracking only mentions or only citations misses the retrieval gap. Keep the final synthesis short, source-backed, and tied to the next action.

CHAPTER 9

9. Productizing for clients

Use the same Markdown-first report structure for one-off audits, monthly retainers, lead magnets, and routine handoffs. Keep deterministic evidence collection separate from interpretation.

CHAPTER 10

10. Case studies

10.1 Industrial manufacturer

Result: monthly AI referral traffic grew from near-zero to a measurable assisted-conversion channel.

Tactics applied: direct-answer page restructure, original technical benchmarks, schema hygiene, and trade-publication mentions.

10.2 Healthcare comparison site

Result: citations appeared across Google AIO, ChatGPT, and Gemini after entity facts and expert review were made visible.

Tactics applied: YMYL author bylines, source-backed comparison tables, third-party profile parity, and prompt reruns.

CHAPTER 11

11. Sources

Primary evidence

11.1 Source A

(#sources)

Prompt capture, crawl export, and source ledger row.

↗

11.2 Source B

(#sources)

Third-party corroboration and profile parity note.

↗

Supplementary evidence

11.3 Source C

(#sources)

Appendix file, screenshot reference, or companion report.

↗

(#

PEER-REVIEWED PAPERS AND ACADEMIC STUDIES

11.4 GEO: Generative Engine Optimization

The first peer-reviewed baseline. Tactics tested on 10k queries.

11.5 News source citing patterns in AI search systems

Top source concentration and citation dynamics.

Q2 2026 FIELD EVIDENCE

11.6 Ahrefs: schema markup has no impact on AI visibility

1,885 vs 4,000 controls, difference-in-differences. Source used to downgrade schema from growth lever to hygiene.

11.7 Growth memo: the consensus gap

Only a small share of cited URLs overlap across engines; engine-specific reporting is required.

11.8 G2: the answer economy research

B2B buyers increasingly start with answer engines, so reports separate discovery, shortlist, and conversion evidence.

CHAPTER 12

12. Appendices

- 🗋 Source ledger appendix (../LLM-VISIBILITY-TOOLBOX/REPORT.MD)
- 🗋 Client audit example (../CLIENT-AI-SEARCH-AUDIT/REPORT.HTML)
- 🗋 Style preview index (STYLE-PREVIEWS/INDEX.HTML)
