

Apple Brand Style Guide

Apple-inspired report presentation guide. Use this specimen to see how Apple-styled reports handle evidence, metrics, recommendations, notifications, and handoff blocks with restraint.

Apple styling is quiet, spacious, precise, and product-like. The report should feel polished and intentional: soft hierarchy, few borders, generous whitespace, concise copy, and calm state colour.

Apple style manifest

Brand: Apple

**Shape language: refined
surfaces, subtle rounding,
minimal visible chrome**

**Evidence grammar: clear
status labels, calm colour, no
visual noise**

**Report mode: polished
executive/product evidence
report**

Primary accent: Apple blue

**Best use: executive
summaries, product
narratives, client
recommendations**

1.1. Foundation tokens

1.1 White and near-white surfaces

Use white as the primary canvas and light neutrals for grouped content. Purpose: create focus and make the report feel effortless.

1.2 Graphite text

Use high-contrast graphite for body text and softer grey for metadata. Purpose: clarity without visual heaviness.

1.3 Apple blue action

Use blue for links, active states, selected navigation, and primary action.

Purpose: direct attention without competing with content.

1.4 State colour family

Use soft red, amber, blue, and green notification hues with rounded shapes.

Purpose: status should feel system-native, not alarming.

1.5 Large title

Use confident, clean sans-serif display type with tight but readable tracking.

Purpose: premium hierarchy.

1.6 Reading copy

Use generous leading and paragraph spacing.

Purpose: make executive reading feel light and fast.

1.7 Metadata

Use small sans-serif labels, not a heavy terminal-style mono. Purpose: keep provenance present but quiet.

1.8 Code examples

Use light code panels with subtle borders and rounded controls. Purpose: technical details should feel integrated with the product system.

2. 2. Report element index

01 — Foundations — surfaces, type, colour, radii

02 — Notifications — success, warning, information, critical

03 — Data — KPI cards, tables, bars, source ledger

04 — Recommendations — priorities, good/bad, brief, checklist

05 — Export — code, source card, privacy note

DESIGN RULE: make the next action obvious, then remove everything that does not help the reader decide.

▲ **Action Prompt**

COPYABLE ACTION PROMPT

Reference this report action: Design rule: make the next action obvious, then remove everything that does not help the reader decide.

Guide me through the tools, resources, accounts, permissions, source material,

and access needed to take this action.
Break the work into numbered steps, call out any missing inputs before execution, include safe handling for credentials or confidential data, and finish with verification evidence I can capture.

3. 3. Notification variations

3.1 **Critical**

Use for blockers. Apple styling should keep the shape composed:

3.2 **Warning**

Use for risk and partial evidence. Keep copy neutral and specific; avoid dramatic language.

rounded panel,
concise title, direct
recovery action.

3.3 Information

Use for method,
assumptions, or
supporting context.
Keep it quiet and
readable.

3.4 Success

Use for verified wins
and shipped work.
Focus on what is now
safe to preserve.

*Apple-styled reports should make complexity feel resolved:
every component has a purpose, every state has a label, and
every recommendation has a clear next step.*

4. 4. Data and evidence examples

Core report components
shown in this specimen.

0

Private artifacts included in
public export.

Element	Purpose	Apple treatment	Verification
Cover	First impression	Large type, calm whitespace	Title fits A4 and slides
KPI	Executive metric	Rounded quiet card, large value	Period and source included
Notification	State communication	Soft colour and explicit label	Meaning survives grayscale
Brief	Action handoff	Clean field structure	Owner and acceptance present

**Evidence
coverage
– 92%**

**Component
coverage
– 88%**

**Notification
clarity – 84%**

**Print
readiness
– 96%**

A001 — Token audit — High confidence; verifies surface, text, accent, and state roles.

A002 — Component review — High confidence; checks cover, cards, tables, badges, and briefs.

A003 — Export review — Medium confidence; confirms A4, US Letter, and slides outputs.

5. 5. Recommendation examples

5.1 Critical component issue

Use for a blocker that prevents the report from being trusted or read. **EVIDENCE:** **VERIFIED**

Owner: Design. Due: Current iteration. Source: A002.

5.2 High-priority refinement

Use for issues that reduce clarity but do not block interpretation.

EVIDENCE: **PARTIAL**

Owner: Content. Due: Next pass. Source: A001.

5.3 Medium enhancement

Use for optional improvements that polish the reader experience.

EVIDENCE: **INFERRED**

Owner: Design systems. Due: Backlog. Source: A003.

done

5.4 Completed pattern

Use to show a verified style pattern that should not regress.

EVIDENCE: **VERIFIED**

Owner: Design. Verified: A001.

5.5 **Preserve**

- Spacious section rhythm.
- Short, direct labels.
- Minimal chrome around evidence.

5.6 **Avoid**

- Dense tables without breathing room.
- Over-coloured panels.
- Decorative elements that do not clarify meaning.

Task: Apply Apple-styled report components to an

executive audit.

Files: report Markdown, brand renderer CSS, PDF exports.

Acceptance: every block has one purpose, clear label, accessible contrast, and print-safe layout.

Verification: render HTML, A4, US Letter, and slides; inspect notification and table readability.

☒ Cover and manifest are brand-specific.

☒ Every state uses text plus colour.

☐ Every KPI includes source and period.

☐ Tables and notification panels remain readable in PDF.

6. 6. Export and source examples

Apple-styled report rule

TEXT CODE

Use fewer, clearer blocks. If a component does not

help the reader decide, remove it.

6.1 Source-card purpose

Use source cards for traceability, but keep them quiet: source ID, summary, confidence, and access rule are enough for the main report.

**PUBLIC
ARTIFACT
RULE**

Apple-styled public examples must not include private client names, URLs, local paths, screenshots, or raw exports.
