

Signal Agency Brand Style Guide

Signal Agency report presentation guide. Use this specimen to see how Signal Agency styles every report element: evidence, data, action, risk, source provenance, and implementation handoff.

Signal Agency is warm-paper editorial dossier design: square components, strong black rules, mono metadata, huge Bricolage numerals, light code blocks, and one terracotta signal accent.

Signal Agency style manifest

Brand: Signal Agency

**Report mode: AI-search
audit dossier**

**Shape language: square,
ruled, no soft cards**

**Primary accent:
terracotta signal**

**Evidence grammar:
verified, partial,
inferred, missing**

**Best use: client evidence
packs, audit findings,
roadmap handoffs**

1. 1. Foundation tokens

1.1 Paper surfaces

Use warm paper for the page, alternate paper for secondary panels, and white only for cards that need

1.2 Ink and rules

Near-black ink defines text, borders, separators, and headers. Purpose: hierarchy comes from

extra contrast.
Purpose: make
the report feel
reviewed, printed, and
evidence-led.

rules and spacing
rather than
decoration.

1.3 Terracotta signal

Terracotta marks decisive moments: cover emphasis, decision tags, critical findings, and small glyphs. Purpose: one accent keeps attention focused.

1.4 Semantic states

Positive, warning, information, and missing states use muted report-safe hues. Purpose: notifications stay

legible in PDF
and never rely on
colour alone.

1.5 Display title

Bricolage Grotesque, tight tracking, large scale. Purpose: create editorial authority on covers and chapter openings.

1.6 Body copy

Instrument Sans, readable line length, calm rhythm. Purpose: keep findings legible across HTML, A4, US Letter, and slide exports.

1.7 Mono metadata

JetBrains Mono for source IDs, dates, engine names, priorities, and run labels. Purpose: evidence provenance is always scannable.

1.8 Code examples

Light paper code panels with terracotta labels. Purpose: keep examples inside the editorial system rather than switching to a dark terminal style.

2. 2. Navigation and metadata

§ 01 — Foundation tokens — colour, type, spacing, radii

§ 02 — Navigation and metadata — cover, manifest, contents

§ 03 — Evidence and notifications — badges, states, callouts

§ 04 — Data blocks — KPIs, tables, bars, ledgers

§ 05 — Recommendation blocks — priorities, preserve/fix, brief, checklist

§ 06 — Export rules — PDF and public-safety checks

DESIGN RULE: lead with the decision, then show the evidence that supports it. Owner: Strategy · Review every export.

DATA, AND FINISH WITH
VERIFICATION EVIDENCE I
CAN CAPTURE.

3.3. Evidence and notification variations

3.1 Critical notification

Use for retrieval
blockers, missing
citations,
security/privacy

3.2 Warning notification

Use for partial
evidence, parity
drift, stale facts, or
execution risk.

risk, or anything
that changes the
next action.

Shape: square
panel, strong rule,
explicit label.

Shape: square
panel with warm
state colour
and concise
body copy.

3.3 Information notification

Use for context, method notes, or assumptions.
Shape: calm blue-

3.4 Positive notification

Use for verified wins and protected patterns. Shape:

state panel; always
include what the
reader should do
with it.

subdued green-
state panel; avoid
celebratory
language.

3.5 Editorial callout

Callouts are reserved for important interpretation, not normal paragraphs. The title states the finding; the body explains why it matters.

Strong Signal Agency reports separate observed evidence from interpretation, then turn only verified or clearly labelled partial evidence into roadmap items.

4. 4. Data block examples

3/5

Engines with at
least partial visibility.
Source: C001.
Trend: +1.

27

Evidence references
captured this window.
Source: ledger.

6

Element	Purpose	Signal Agency treatment	Verification
Findings table	Dense evidence comparison	Bottom rules, mono headers, evidence badges	Header and cells wrap in PDF
KPI card	Executive metric	Ink header, huge numeral, source footer	Source ID and period present
Source ledger	Claim traceability	Source ID, summary, confidence	Raw evidence stored separately

Element	Purpose	Signal Agency treatment	Verification
Brief card	Worker handoff	Inverted ink panel, fixed fields	Acceptance and verification included

C001 — Prompt capture batch — High confidence; raw transcripts stored securely.

C002 — Rendered crawl — High confidence; confirms first-fetch visibility.

C003 — Analytics export — Medium confidence; prioritises commercial pages.

C004 — Parity review — Medium confidence; checks third-party fact drift.

5.5. Recommendation and handoff blocks

5.1 P0 retrieval blocker

Use a priority card when one finding needs executive visibility, owner, due date, source IDs, and verification.

EVIDENCE: **VERIFIED**

Owner: Editorial. Due: 2026-W23. Sources:
C001, C002.

5.2 P1 evidence proximity

Use for important fixes where facts exist but are too far from the claim, table, or source card.

EVIDENCE: **PARTIAL**

Owner: Content. Due: 2026-W25. Sources:
C003, C004.

5.3 P2 corroboration gap

Use for third-party profile, review, and entity consistency work that supports answer-engine trust.

EVIDENCE: **INFERRED**

Owner: PR. Due: 2026-W28. Sources: C004.

done

5.4 Done pattern

Use the resolved state for shipped work that should be protected in the next iteration.

EVIDENCE: **VERIFIED**

Owner: Engineering. Verified: C001.

5.5 **Preserve**

- Source IDs beside factual claims.
- Direct-answer opening in first-fetch HTML.
- Clear comparison criteria.

5.6 **Fix**

- Client-rendered critical facts.
- Unsupported superlatives.
- Raw evidence in public artifacts.

Task: Move critical comparison facts into

crawlable HTML and attach source IDs.

Files: comparison template, source-card component, pricing facts module.

Acceptance: direct answer, source IDs, updated date, and criteria table appear in first-fetch HTML.

Verification: rerun per-engine prompt set separately and compare citations.

☒ Evidence badges have source IDs.

☒ PDF exports contain no browser header/footer chrome.

☐ Each priority card has owner, due date, and verification.

- ☐ Public artifact contains no private URLs, paths, screenshots, or names.
-

6. 6. Code, source, and export blocks

Signal Agency code panel

TEXT CODE

REPORT RULE: EVERY RECOMMENDATION
MUST INCLUDE SOURCE IDS, OWNER, DUE

DATE, AND VERIFICATION.
EXPORT RULE: SUPPRESS BROWSER PDF
HEADER/FOOTER; REPORT CHROME BELONGS
IN HTML/CSS.

6.1 Source-card purpose

Use source cards to explain where evidence lives, what claim it supports, confidence, and whether the raw material is public, internal, confidential, or redacted.

PUBLIC ARTIFACT RULE

Signal Agency public examples must use placeholders only. Raw transcripts, screenshots, private URLs, client names, and local paths stay in approved secure storage.
