Client AI Search Audit

Placeholder-safe client report template for AI Overviews, Gemini, ChatGPT, AI Mode, and Perplexity visibility.

Prepared for: Example client. Scope: example.com priority pages. Replace placeholders only after live evidence collection.

Executive summary

Example client appears in some answer-engine responses for category and comparison prompts, but source coverage is uneven. Priority gaps are retrieval eligibility, source-card proximity, and third-party corroboration parity. EVIDENCE: **PARTIAL**

3/5

Engines with at least partial visibility.

12

Priority URLs reviewed.

27

Source IDs captured.

6

P0/P1 roadmap items.

DECISION: prioritise comparison and pricing pages before lower-impact article refreshes.

▼ **Action Prompt**

1. Engine findings

Engine	Finding	Evidence	Next action
AIO	Brand cited for two comparison prompts.	EVIDENCE: VERIFIED	Add source cards to pages with citations but weak snippets.
Gemini	Mentions brand but misses pricing constraints.	EVIDENCE: PARTIAL	Add visible plan constraints and updated date.
ChatGPT	Recommendation inferred from third-party profiles.	EVIDENCE: INFERRED	Improve profile parity and owned corroboration.
AI Mode	Partial feature coverage, no comparison citation.	EVIDENCE: PARTIAL	Strengthen direct-answer opening on comparison page.
Perplexity	No citation found in priority prompt set.	EVIDENCE: MISSING	Build third-party corroboration and rerun prompt set.

CHAPTER 2

2. Source ledger

Source ID	Source	Confidence	Notes
C001	Prompt capture batch	High	Use raw transcript plus screenshot in private evidence folder.
C002	Rendered crawl	High	Confirms client-rendered sections missing from first fetch.
C003	Analytics export	Medium	Prioritises pages with commercial intent.
C004	Third-party profile parity review	Medium	Category and pricing facts mismatch owned page.

2.1 Privacy rule

Public issues, PRs, and examples must not include non-public names, restricted URLs, local paths, screenshots, or raw exports. Use placeholders and keep evidence in the approved secure storage location.

3. Page-type weighted findings

3.1 P0: Comparison page retrieval gap

Comparison content answers the right intent but key criteria are below client-rendered sections. Move the answer, feature table, pricing caveats, and source IDs into crawlable first-fetch HTML.

EVIDENCE: VERIFIED

3.2 P1: Pricing facts lack nearby evidence

The pricing page states plan limits but lacks updated date, source card, and consistent third-party parity. Add canonical values and cite source IDs near the claims. EVIDENCE: PARTIAL

3.3 Preserve

Clear category positioning, strong customer proof, and relevant comparison intent coverage.

3.4 Fix

Hidden content, unsupported superlatives, stale profile facts, and Perplexity source gaps.

4. Implementation brief

TEXT CODE

Task: Improve /compare/example-vs-competitor for AI search citation readiness.
Files: comparison page template, pricing facts component, source-card component.
Acceptance: raw HTML contains direct answer, source IDs C001-C004, updated date, and criteria table.
Verification: rerun AIO, Gemini, ChatGPT, AI Mode, and Perplexity prompt set separately.

5. Verification checklist

- Confirm live evidence collection date and source IDs.
- Re-run crawl after implementation and compare raw vs rendered HTML.
- Re-run per-engine prompt set and record each answer separately.
- Update third-party profile parity table.
- Convert recurring monitoring into a monthly report routine.
