

Report Style Showcase

Executive summary

1. Why this matters now

2. Highest impact, most validated

2.1 Earned media on third-party platforms

3. On-page content tactics

4. Technical tactics

4.1 Info panel

4.2 Impact panel

4.3 Action panel

4.4 Tactic card

4.5 Good row

4.6 Bad row

4.7 Myth

4.8 Fact

5. Off-page and authority

6. Format and experimental tactics

6.1 SEO myths called out

7. Measurement and reporting

7.1 High-priority visual checks

7.2 Refresh checklist per page

8. What does not work

8.1 Combined finding

9. Productizing for clients

10. Case studies

Internal toolkit · May 2026 · v4

Component stress-test for DESIGN.md-backed report styles. Render this same Markdown through different templates to compare typography, palette, spacing, borders, cards, tables, badges, code blocks, and print profiles.

34

Renderer templates.

▼ What changed in v4

ACTION: review the numbered chapters below and compare the generated HTML against the source Toolbox patterns.

▼ Action Prompt

CHAPTER 1

[anchor links](#) (#priority-and-checklist) [appendix links](#) (../llm-visibility-toolbox/report.html)

EVIDENCE: **VERIFIED** EVIDENCE: **PARTIAL** EVIDENCE: **INFERRED** EVIDENCE: **MISSING**

CHAPTER 2

STRONG

ACTION: coordinate one trade article, one community thread, one video transcript, and one partner citation within the same quarter.

▼ Action Prompt

CHAPTER 3

Component	Stress condition	Expected result
Evidence badge	Long table cell with badge EVIDENCE: VERIFIED	Badge stays readable and does not split words.
Facts table	Multiple columns with prose	Table remains usable in HTML and constrained in print.
Source card	Evidence note near claim	Card is visually distinct from normal paragraphs.
Sidebar	Many headings	Sticky TOC remains secondary to content and active link updates.

CHAPTER 4

4.1 Info panel

Use info panels for caveats, assumptions, and reading guidance that should not become recommendations.

4.2 Impact panel

Why this changes the plan: a high-impact finding changes sequencing, budget, owner, or acceptance criteria.

4.3 Action panel

Next action: turn the finding into a concrete implementation step with owner, proof path, and rerun command.

▼ **Action Prompt**

4.4 Tactic card

- What: compact recommendation summary.
- Why: links action to evidence.
- How: gives implementation shape.
- Verify: names the acceptance check.

4.5 Good row

Crawlable claims, source IDs, direct answers, and page-type weighting.

4.6 Bad row

Unsupported claims, hidden content, generic tactics, and missing verification.

4.7 Myth

Every page needs the same GEO checklist.

4.8 Fact

Page type determines which tactics are useful, conditional, or noise.

▼ How to read this document (evidence badges)

▼ Key methodology caveat

Quotes highlight expert evidence, user language, or a decision constraint without turning it into a recommendation.

Author block template

TEXT CODE

Written by Dr. Jane Doe, PhD
Principal Data Scientist, ExampleCo

Jane led the data platform team from 2019 to 2024 and now researches LLM retrieval.

[LinkedIn](#) | [Google Scholar](#) | [Personal site](#)

TEXT CODE

Rendered Mermaid example, embedded as self-contained SVG.

$$\text{LLM visibility} = \alpha \text{ citations} + \beta \text{ mentions} + \gamma \text{ retrieval} - \delta \text{ decay}$$

Rendered LaTeX example, embedded as self-contained HTML.

Citation readiness — 72%

Third-party corroboration — 58%

Retrieval eligibility — 81%

CHAPTER 5

CHAPTER 6

6.1 SEO myths called out

Claims that circulate widely but cannot be traced to a primary source, or are contradicted by controlled evidence, should be called out explicitly.

“**Schema markup alone creates citation uplift.**” Contradicted by controlled or near-controlled studies; ship schema as hygiene.

“**Longer content always gets cited more.**” Engine-dependent; content depth helps only when it improves answer density and source usefulness.

7.1 High-priority visual checks

Review spacing, table width, no-wrap badges, active TOC highlighting, print CSS, and component contrast.

7.2 Refresh checklist per page

- ☐ Replace at least one statistic with newer data.
- ☐ Add or revise one example.
- ☐ Remove outdated tool or vendor references.
- ☐ Update screenshots if UI has changed.
- ☐ Update `dateModified` in schema.
- ☐ Add visible “Last updated” line.

8.1 Combined finding

AI is now a discovery layer, but engines disagree on sources. Tracking only mentions or only citations misses the retrieval gap. Keep the final synthesis short, source-backed, and tied to the next action.

CHAPTER 9

CHAPTER 10

10.1 Industrial manufacturer

Result: monthly AI referral traffic grew from near-zero to a measurable assisted-conversion channel.

Tactics applied: direct-answer page restructure, original technical benchmarks, schema hygiene, and trade-publication mentions.

10.2 Healthcare comparison site

Result: citations appeared across Google AIO, ChatGPT, and Gemini after entity facts and expert review were made visible.

Tactics applied: YMYL author bylines, source-backed comparison tables, third-party profile parity, and prompt reruns.

CHAPTER 11

Primary evidence

11.1 Source A

Prompt capture, crawl export, and source ledger row.

11.2 Source B

Third-party corroboration and profile parity note.

Supplementary evidence

11.3 Source C

Appendix file, screenshot reference, or companion report.
